Assignment All assignments are to be submitted strictly before start of next lab session through online only. Late assignments will not be entertained and will be awarded '0' marks.

1. Below is the code for counter which counts first 5 values mod-3 values. Write the testbench for the same and show the proper output waveforms and understand the code.

Experiment No.- 10 (Counters)

```
module countseq (input clk, rst, output reg [2:0] modfive, output [1:0] cnt);
wire s1;
wire [2:0] b1, b2;
wire [1:0] b3, b4;
assign s1 = (modfive ==5);
assign b1 = modfive +1;
assign b2 = s1 ? 1 : b1;
always @ ( posedge clk, posedge rst) begin
if (rst)
modfive <= 1;
else modfive <= b2;
end
```
